Course in Electronic Music - Sound studies aimed at producing electronic music starting from

Ableton software, practical synthesis, mixing and mastering, and up to branding and marketing.

2023-2024

HackerU College

FullStack Web Development

During my course at HackerU, I learned to perform tasks more effectively using best practices. The course covered a wide range of topics, enhancing the personal skills I had developed over time. This experience not only strengthened my technical knowledge but also helped me adopt more efficient methods and approaches, preparing me to bring added value to future roles.

## LANGUAGES

English  Conversational

Hebrew  Proficient

## A B O U T M E

I'm a 25-year-old web developer, constantly working on personal projects and staying up-to-date with the latest web technologies. I'm highly determined to learn new skills and expand my knowledge, always striving to integrate advancements like AI and other future technologies into my work. I'm passionate about sharing what I learn and helping others wherever I can.

As someone who loves technology, I stay as updated as possible on new advancements and have a wide range of interests across different fields.

Since high school, I was exposed to web development and learned the basics of HTML, CSS, and JavaScript. As I continued, I discovered new and interesting ways to implement tasks differently. I have some interesting projects on my GitHub, one of which closely resembles a Spotify-like application, complete with a server-side component that stores data and allows users to upload and play songs. Additionally, I learned to work with WebSocket, which enables real-time data updates.
