📍 Ramat-Gan Benyahu 14

SKILLS

FullStack Development

Proficient in React.js, Node.js, JavaScript, GitHub, MongoDB, and other programming libraries.

EDUCATION

2014-2017

Blich High-School

2021-2022

Yoav Gera Sound School

Course in Electronic Music - Sound studies aimed

at producing electronic music starting from

Ableton software, practical synthesis, mixing and mastering, and up to branding and marketing.

LANGUAGES

English Conversational

Hebrew Proficient

A B O U T M E

Full-stack web developer, self-driven and hands-on — I build personal projects end-to-end, from application logic to the infrastructure that runs them. My work spans real-time systems using WebSocket, media-handling applications with custom backends, and, more recently, the systems and security layer underneath my deployments. I actively adopt emerging tools, including AI-assisted development workflows, and apply them directly in what I build.

System and Infrastructure

- Administer a self-managed VPS end-to-end: provisioning, hardening, and ongoing maintenance
- Run Docker to isolate and manage multiple project environments as containers
- Deploy public-facing projects with a security-first approach — auditing and closing unnecessary open ports, minimizing attack surface
- Studying Linux system administration and security fundamentals via Kali Linux

HackerU College

FullStack Web Development

During my course at HackerU, I learned to perform tasks more effectively using best practices. The course covered a wide range of topics, enhancing the personal skills I had developed over time. This experience strengthened my technical knowledge and helped me adopt more efficient methods and approaches, preparing me to bring added value to future roles.
